MGI-report (2016): Digital Globalization: The new area of global flows:
"exploding digital flows in a deeply connected world"
- cross-border bandwidth 45 times larger since 2005 (next five years: additional 9 times)
- 86% of tech-based start-ups have some cross-border activity

--> *New challenges for business network and information modelling*

Business network and information modelling challenge:
- balancing between people and processes
- modelling on firm level (technology, organization, network)
- exploring & implementing complexity science (process, skills)
- performing
- understanding
- extending
- co-creating
Business and business world together human life

THE DEKRA STORY

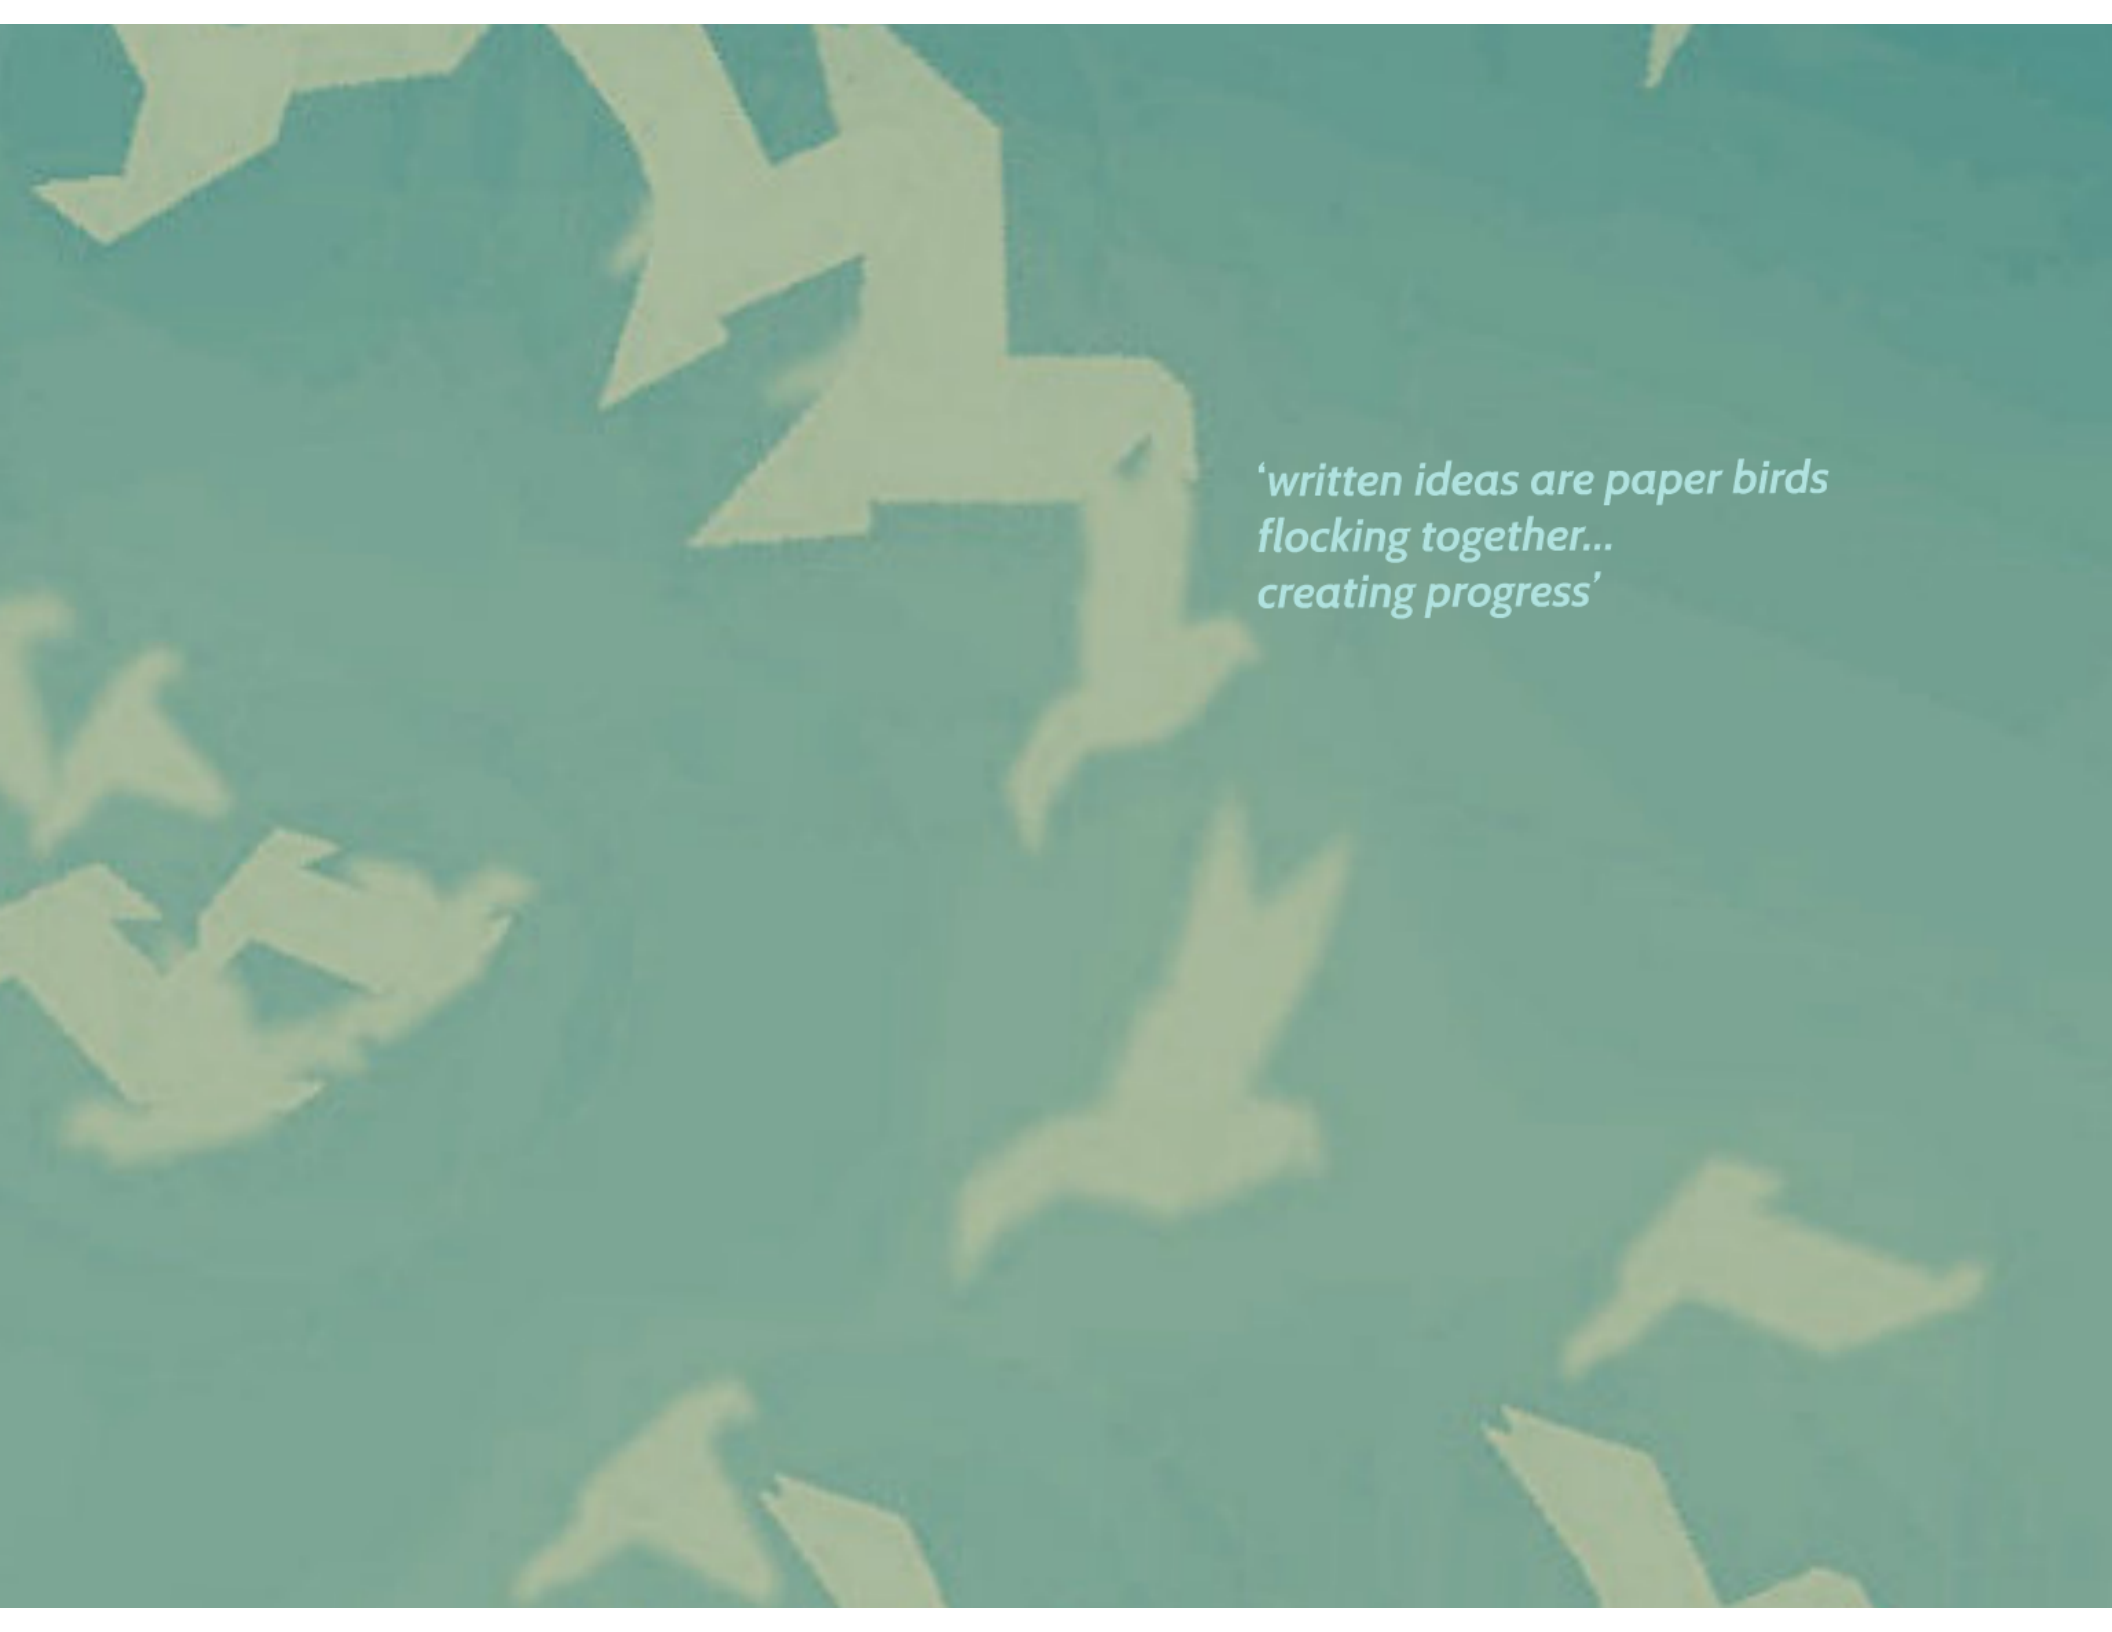

ANNIVERSARY ISSUE

90 YEARS
OF SAFETY

 DEKRA

The background is a solid teal color. Scattered across it are numerous white paper birds, each cut out from a single sheet of paper. The birds are in various stages of flight, with wings spread in different directions, creating a sense of movement and a flock. The paper birds are the primary visual element, contrasting sharply with the teal background.

*'written ideas are paper birds
flocking together...
creating progress'*

Quality of information in (business) network modelling from an evolutionary perspective

prof. dr. ir. Jos J.M. Trienekens

MGI-report (2016): Digital Globalization: The new area of global flows:
"exploding digital flows in a deeply connected world"
- cross-border bandwidth 45 times larger since 2005 (next five years: additional 9 times)
- 80% of tech-based start-ups have some cross-border activity

--> *New challenges for business network and information modelling*

business network and information modelling challenge:
- balancing business structure and processes
- existing vs. from scratch (technology, organization, network)
enabling & implementing complexity science processes, such as:
- self-organizing
- self-optimizing
- self-learning
- re-creating
connect with businesses and high-quality human skills
